<p id="p1"><font size="4.8px" color="#656d6a"><b>Starting with your smile...

</b></font> <br>Welcome to <b>SRM Amaravati Dental Center</b>, office of Merrifield dentist,

<b> Dr. Manoj Sai Prattipati</b>. We are glad you have chosen us for your oral health

needs and hope that every encounter with our office and staff exceeds your

expectations. We know our patients have a choice in Merrifield dentists, so we go
```

out of our way to deliver the level of dental care and compassion we would want for our own families. </p>

<p id="p2">Why Choose Us?

Patients are the heart of our practice, so it makes sense that we would go out of the way to provide comfortable waiting and treatment areas complete with the types of amenities you would expect from the premier dental practice.
 Our office is filled with state of the art diagnostic and dental treatment technology. We believe our patients deserve only the best, and our staff works hard to deliver.
We believe you deserve only the best in oral health care, which is why we have implemented some of the greatest in cutting edge dental technology available today.
These advanced systems allow us to provide a sophisticated level of care that surpasses the expectations of our patients, delivering high-quality results with extreme accuracy.</p>

DENTAL CHECKUPS

Welcome to Smile Gallery of SRM Amaravati Dental Clinics We have worked hard to present the best and exceptional smiles which you always dreamed for! Dr Manoj have developed beautiful smiles..

</p>

</div>

<div id="d14"><p id="p2"><h3>Endodontic & Conservative</h3>

Gum disease is the inflammation or infection that attacks the gums and bone that hold your teeth in place.

Gum disease can be treated in ways ranging from cleaning to surgery but it can be prevented altogether by regular brushing, flossing and professional cleaning.

Various periodontal treatments include Scaling, Deep Cleaning, Root Planing, Flap surgery,

Bone and Soft Tissue Grafting (Regeneration).

Lasers are frequently used in treating gum diseases.</p>

<p><h3>Pediatric Dentistry</h3>

Baby teeth set the foundation for healthy permanent teeth. It is important to keep the teeth clean and teach children to brush and floss.

Dental visits have to be early and frequent to monitor the development of the teeth. The baby teeth serve as placeholders for the permanent teeth. Sealants are a thin coating placed on the biting surfaces of the back teeth to prevent cavities.

Routine professional cleaning and fluoride treatment are essential to ensure a life time of healthy teeth.</p>

<p><h3>Full Mouth Rehabilitation</h3>

When there are several problems in a single case, a team of specialists work together to restore the function and appearance of the teeth. This full mouth rehabilitation is highly successful with our careful planning and treatment sequencing. The cosmetic dentist works along with the periodontists, orthodontists and maxillofacial surgeon to provide a stunning SMILE MAKEOVER.</p>

<p><h3>Dental Implants</h3>

Titanium implants serve as the artificial root in the jaw to support crowns and dentures. When teeth are missing in the jaw, fixed artificial teeth can be provided by inserting titanium implants which serve as the tooth or foundation for the teeth. These implants provide a very stable support to help restore function and appearance. The implants are placed in the clinic under local anaesthetic and after a period of healing the artificial teeth are fabricated. Implants are used in combinations with bridges, dentures or crowns to replace any number of missing teeth.</p>

<p><h3>Orthodontic Treatments</h3>

Orthodontics refers to the use of wires to align crooked or crowded teeth and to close gaps between teeth. Though Orthodontics can be started at any age, it is strongly advised to bring your child for a checkup anytime after 6 years of age, since many

adult dental problems can be avoided by early orthodontics. Adults can also have their teeth straightened as orthodontics is not limited to children.

<h2>Tips to care your teeth</h2>

<h4>Eat more cheese</h4>

Milk and yogurt keep teeth sparkling and cavity-free, too, because they contain the minerals calcium and phosphorus, which promote the remineralization of tooth enamel.

You may be thinking that strong enamel has nothing to do with a white smile, but it does. It's the outermost layer of your teeth and, therefore, is not only what you see, but also a protectant. When it becomes stained, it determines the color of your tooth. Replenishing the calcium and phosphate that builds it up will keep it strong and healthy.

<h4>Use hydrogen peroxide</h4>. This is best known as a powerful bleaching agent. It is a chemical substance with the composition H_2O_2 -- incredibly close to water. This useful and versatile substance is employed as an antiseptic, disinfectant, oxidizer and even as a propellant for rockets! And it is also an ingredient in toothpastes, disinfectants and mouthwashes.

Make a solution with equal parts hydrogen peroxide and water. Use it like mouthwash. And don't worry: it has been declared safe to use as a teeth whitener by the ADA.

</div>

<div id="d144">

<h4>Eat crunchy foods</h4> They will help remove many of the sugars and chemicals that cause stains

and cavities. It's the sticky foods that are your main criminals.

An apple a day keeps the doctor and the dentist away. They are known to contain malic acid -- which is a chemical actually used in teeth whitening products to dissolve stains.

A few vegetables like cucumbers, broccoli, celery and carrots are also natural simple tooth whiteners. Because they're crunchy, they get the saliva going, aiding in lessening tooth stains.

<h4>Rinse with water after eating</h4> Removing any leftover food or residue from your teeth will help prevent stain and decay. This is an especially good idea if you're away from home and can't squeeze in a good tooth-brushing.

</div>

<div id="d15">

<h2>Common dental problems</h2>

The first stage of gum disease is called gingivitis, which is the only stage that is reversible. If not treated, gingivitis may lead to a more serious, destructive form of gum/periodontal disease called periodontitis. It is possible to have gum disease and have no warning signs. That is one reason why regular dental checkups and periodontal examinations are so important. Treatment methods depend upon the type of disease and how far the condition has progressed. Good oral hygiene at home is essential to help keep periodontal disease from becoming more serious or recurring. Brush twice a day, clean between your teeth daily, eat a balanced diet, and schedule regular dental visits for a lifetime of healthy smiles.

<h4>Missing Teeth</h4>

Did you know that the average adult between the ages of 20 and 64 has three or more

decayed or missing teeth? If you are missing one or more teeth, there are plenty of reasons to correct the problem. For one thing, a large space between your teeth may affect how you speak or eat. Even if it's not noticeable, a missing molar can affect how you chew. Remaining teeth may shift and in some cases, bone loss can occur around a missing tooth. With today's advances, you don't have to suffer from missing teeth

</div>

<div id="d155">

<h4>Dry mouth</h4>

Everyone's mouth can be dry sometimes, but if you feel like your mouth is always dry, it may be time to seek treatment. Medications and certain health conditions can lead to

dry mouth. A dentist will check your teeth for signs of decay that can result from decreased salivary flow. A physician will test for any underlying disease or conditions that may be causing your dry mouth. Having a dry mouth is not itself serious but taking care of your teeth and gums and regular dental visits are important when living with dry mouth. Without the cleansing effects of saliva, tooth decay and other oral health problems become more common. Patients using oral inhalers for asthma often develop oral candidiasis, an oral fungal infection, and are encouraged to rinse their mouths with water after using the inhaler. Tell your dentist what medications you are taking and any other information about your health that may help identify the cause of your dry mouth.

<div id="d17">

<h3> Vitamin C loaded fruits and veggies can give you white teeth</h3>

Citrus fruits as well as those having loads of vitamin C in them can also help you get rid of your yellow teeth. They have bleaching effect on your teeth. So, use strawberries, tomatoes, amla (gooseberry), orange and the most effective lemon to bleach your teeth and get that sparkling whiteness. Mash them, rub them, take out their juice, whatever you do, just get them in contact with your yellow teeth.

Cut a strawberry in two pieces. Take a half of it and sprinkle a little baking soda on to it.

Rub your teeth with this. You may avoid using baking soda and rub with plain strawberry instead. The malic acid in strawberry with its astringent properties will give your pearly teeth.

Mash the strawberries and squeeze to take out the juice. Apply this juice on your teeth and wash after a minute or two. You may also use the pulp to this effect. Always brush your teeth with your regular paste after using strawberries on them.

<h3>Dental & Oral Checkup</h3>

In the first consultation of Oral Checkup, the teeth & gums are examined.

It gives a fair picture of the conditions present in the oral cavity.

It may further involve taking other diagnostic records to diagnose the conditions.

Based on the examination & investigation, if any the treatments goes are identified. The conditions are explain to the client & suitable treatment plan is formatted.

</p>
